Dušan Gligorić

Senior DevOps Engineer && Golang Developer

email: hello@dusan.work | phone: +38 62 527 8214 | github: @76creates | linkedin: in/dusangligoric

About Me

Seasoned engineer with extensive experience building infrastructure from the ground up at startups and developing high-availability, distributed software services. I possess the skills needed to bootstrap and scale your tech stack. Over the past 11 years, I've gained hands-on knowledge across various roles, including support, QA, and lead Dev/SysOps. This breadth of experience has given me wide insight into the entire supply chain of writing, delivering, and supporting a product. My long-term career goal is to take on leadership roles and mentor engineers to reach their full potential. Outside of work, I enjoy socializing, engaging in outdoor activities, being creative, and reading about natural sciences. Maintaining a strong work-life balance is important to me, and you'll never see me facing burnout.

Work Experience

Nebius - Senior SRE

Amsterdam, Netherlands — Apr 2025 ~

[K8s] [Cloud]

Trickest - Lead DevOps && Lead Workflow Engine Developer

Belgrade, Serbia — Sep 2021 - Mar 2025

Lead DevOps:

Joined team at early stage as a lead DevOps/SysOps engineer, my responsibility was reinventing 1st gen skeleton infra, establishing SDLC, making the IT system secure, and helping the product mature. There was many moving parts, some of the tasks included:

- Managing the AWS infra some of which parts are EKS, RDS, Route53, EC2, and OpenSearch.
- Kubernetes, Github, ArgoCD, Terraform, Helm as a part of the code lifecycle.
- Grafana, Prometheus, InfluxDB, Data Dog, Opsgenie as a part of the observability.
- Self managing Clickhouse, OpenVPN, Valut, Salt stack.
- Managing documentations, writing policies, and leading technical aspect of the certification process for ISO27001.

Lead Workflow Engine Developer:

Facing limitations with existing solution using 3d party services, I have designed and co-developed the set of services that would come to be Trickest workflow engine comprised mainly of graph job scheduler, worker node manager, and artifact storage. Counting over 80k lines of GoLang code it has achieved significant performance increase, workflow scale, and product value in general.

G-Research - DevOps

Belgrade, Serbia — Part Time — Jun 2021 - Sep 2021

[Github] [Github Actions] [Bash]

Seven Bridges - DevOps

Belgrade, Serbia — Sep 2019 - Jul 2021

Somewhere between DevOps and Sys Admin at moments, broad spectre of tasks were a part of the daily work, bellow you will find sumarization attempt:

Infrastructure/Operations:

- Managing cloud infrastructure on AWS, and GCP.
- Maintaining and imporving Anisble, monitoring, Docker, GitLab CI, artifact stores.
- Linux system maintenance, and migrations.
- Tasks required for certification procedures, and planning, such as FIPS-140, and FedRAMP.

Development:

- Principal developer for the DevOps team's codebase ranging from Python scripts to the GoLang in-house IDP and OPS services.

Stackpath - QA and Support Engineer II

Belgrade, Serbia — Jan 2017 - Aug 2019

[Python] [Cypress] [GoLang] [Linux] [HTTP] [TCP] [Nginx] [Web performance] [DDOS] [BGP] [JunOS]

Revel POS - POS and Network Support

Belgrade, Serbia — Apr 2015 - Dec 2016

[Python] [Excel VBA] [Wireless networks] [POS] [Payment platform]

NCR - Various Tech Support and Analytics Positions

Belgrade, Serbia — Oct 2013 - Apr 2015

[POS servers] [Cisco] [VBA for Excel] [Epson office printers] [MCX] [NCR self-checkout]

---

* for the sake of relevance some description is reduced to the tags

Skillset

Amazon Web Services	Linux administration	SDLC
Kubernetes	Computer networks	Policies and documentation
GoLang development	Microservices	Software design
Infrastructure as a code	Distributed programming	Cost optimization
GitOps	Configuration management	Leadership
Observability	Python and Bash scripting	Mentorship

No such thing as random.
